

## Experiment - 10

Making Computer LAB in Cisco Packet Tracer

Aim: Making Computer Lab in Cisco Packet Tracer

Software: Packet tracer (End devices, Switches, Connectors)

### Procedure

- Step 1: Launch Cisco Packet Tracer & create a Project
- Step 2: Select the appropriate network device of your Lab.
- Step 3: Drag and drop a switch onto the workplace area. Connect the switch to the power source by clicking on connection, option & selecting Power.
- Step 4: Connect computers to switch by dragging and dropping them onto the workplace area.
- Step 5: Repeat step 4 to add more computers to lab.
- Step 6: Connect the switch to a router.
- Step 7: Configure IP address on the computers.
- Step 8: Configure IP address on router interface.
- Step 9: Test Connectivity.
- Step 10: Customize and expand the lab as desired.

Result: Thus the Computer Lab is Cisco Packet Tracer is set up successfully.
