

Experiment-11

Configuration of a simple static routing in Packet Tracer using a simple topology with two routers.

Aim: To Configure a router using Packet Tracer software here to transmit data between the devices in real time mode & simulation mode.

Software: Packet Tracer / End device, Hubs, Connectors

Procedure

- Step 1: Start Packet Tracer.
- Step 2: Choosing Devices & Connections.
- Step 3: Building the topology adding hosts.
- Step 4: Configuring IP addresses, Gateways & Subnet masks on hosts.
- Step 5: Verifying the Connectivity in real time mode.
- Step 6: Verifying Connectivity in Simulation mode.

Result: Thus configuration of a simple static routing in Packet Tracer using a simple topology with two routers successfully.
