# Experiment -17

Make a computer LAB to transfer a message from one mode to another to design and Stimulate using Cisco Packet Tracer.

Aim: To make a computer lab to transfer a message from one node to another to design and simulate using Cisco Packet tracer.

Software: Packet Tracer, Hubs, connecters

Procedure,

Step 1: Create the network topology

step 2 : configure IP address

Step 3 : Configure the routers

step 4 : Configure routing

Step 5 : send a message

Result, Hence the message is transferred from one mode to another to design and simulate using Cisco Packet tracer successfully.
